Alabama Natural Heritage ProgramSM

Keeping Track of Alabama's Natural Heritage

The Alabama Natural Heritage ProgramSM (ALNHP) was established by The Nature Conservancy in 1989 as one of a network of such programs. The Heritage network includes 50 U.S. States and the District of Columbia, 5 Canadian provinces, 12 countries of Latin America and the Caribbean and a host of other programs situated in federal agencies, Native American nations and other institutions. The majority of these programs are cooperative ventures between agencies of state or federal government and The Nature Conservancy making a public-private partnership collectively known as the Natural Heritage Network.

Natural Heritage Programs have three broad functions: to collect information on the status and distribution of species and natural communities, to manage this information in a standardized way, and to disseminate this information to a wide array of users. Natural Heritage Programs use a standardized information management system to track biodiversity data including taxonomy, distribution, population trends, habitat requirements, relative abundance, quality, condition, and viability. Programs also track non-biological information including land ownership type, land-use and management, distribution of protected areas, and threats to species or their habitat.

ALNHP serves as the science office of The Nature Conservancy of Alabama. It supports the Chapter by supplying biodiversity data, site prioritization, ecoregional and site conservation planning, ecological monitoring and burning, and land management expertise. ALNHP does this with support from public and private partners in conservation. ALNHP is also a member of the Natural Heritage Network and is represented by its membership organization the Association for Biodiversity Information (ABI). The Nature Conservancy and ABI are currently working together to create a new non-profit organization whose goal is to become the authoritative source of information on the conservation of elements of biodiversity. This organization will work to aggregate data from individual Network Programs and will dedicate itself to the furtherance of the Network and the application of Heritage data to biodiversity conservation.

One of the important tasks each heritage program performs is the regular compilation of a "Rare Species Inventory List" for the state that ranks by priority each element based on the number and quality of occurrences. Although these lists are compiled using the best scientific information available at the time, there is always more current information available on a particular species, distribution and/or status. We would appreciate any new information on the abundance or rarity of any of the species on the following list. Please send your comments to the appropriate staff member:

Staff Directory, Resources & Partners

The Alabama Natural Heritage Program

The purpose of the Alabama Natural Heritage Program (ALNHP) is to provide the best available scientific information on the biological diversity of Alabama to guide conservation action and promote sound stewardship practices. Established in 1989, it is one of a network of such programs across the United States, Canada, and Latin America. The majority of these programs are housed within agencies of state or federal government, universities, or within The Nature Conservancy Chapter Offices. ALNHP is one of the few remaining Conservancy-operated Heritage programs, and serves the dual role of a science office for the Conservancy as well as the core responsibilities of a member of the Association for Biodiversity Information. ALNHP provides the following services: biodiversity data management, inventory, site prioritization, conservation planning, Geographical and Information Systems, biological monitoring, and land management expertise. ALNHP performs these services with support from the Alabama Chapter Office as well as a number of public and private conservation partners.

The Nature Conservancy

The mission of The Nature Conservancy is to preserve plants, animals and natural communities that represent the diversity of life on Earth by protecting the lands and waters they need to survive. Based in Arlington, Virginia, The Nature Conservancy is the world's leading private, international conservation group, with more than 1 million members and 1,600 preserves – the largest system of private nature sanctuaries in the world. The Conservancy has helped protect more than 11 million acres of ecologically significant habitat in the United States and more than 55 million acres in Canada, Latin America, the Caribbean, Asia and the Pacific. At the beginning of 2000, the Conservancy managed more than 6.1 million acres. Through its focus on preserving biodiversity, the Conservancy sets clear priorities and focuses its resources accordingly. Its science-based, non-confrontational approach has given it the ability to work with a broad array of partners and to develop innovative conservation strategies. The Conservancy has found that partnerships of all kinds – with landowners, corporations and governments – produce some of the most dramatic conservation results.

Association for Biodiversity Information

The Association for Biodiversity Information (ABI) is an international conservation organization whose mission is to unify, support, and represent the network of Natural Heritage Programs, Conservation Data Centres and other cooperators in the mission of collecting, interpreting and disseminating ecological information critical to the conservation of the world's biological diversity. ABI's four organizational goals are: (1) to help slow the loss of the world's biodiversity, (2) to be a leader in the collection, management, and analysis of biodiversity data, (3) to have strong staffing and funding for Network programs that will result in superior information products and services, (4) to play a central role in conservation decision-making worldwide.

Definition of Heritage Ranks

The Alabama Natural Heritage Program uses the Heritage ranking system developed by The Nature Conservancy. Each species is assigned two ranks; one representing its range-wide or global status (G rank), and one representing its status in the state (S rank). Species with a rank of 1 are most critically imperiled; those with a rank of 5 are most secure.

Global Ranking System		State Ranking System	
G1	Critically imperiled globally (5 or fewer occurrences)	S1	Critically imperiled in Alabama because of extreme rarity (5 or fewer occurrences of very few remaining individuals or acres) or because of some factor(s) making it especially vulnerable to extirpation from Alabama.
G2	Imperiled globally (6 to 20 occurrences).	S2	Imperiled in state because of rarity (6 to 20 occurrences or few remaining individuals or acres) or because of some factor(s) making it very vulnerable to extirpation from Alabama.
G3	Either very rare and local throughout its range or found locally in a restricted range (21 to 100 occurrences).	S3	Rare or uncommon in Alabama (on the order of 21 to 100 occurrences).
G4	Apparently secure globally.	S4	Apparently secure in Alabama, with many occurrences.
G5	Demonstrably secure globally.	S5	Demonstrably secure in Alabama and essentially "ineradicable" under present conditions.
GH	Of historical occurrence throughout its range.	SA	Accidental in Alabama, including species (usually birds or butterflies) recorded once or twice or only at very great intervals, hundreds or even thousands of miles outside their usual range; a few of these species may even have bred on the one or two occasions they were recorded.
GU	Possibly in peril range-wide but status uncertain.	SE	An exotic established in Alabama.
GX	Believed to be extinct throughout range.	SH	Of historical occurrence, perhaps not verified in the past 20 years, and suspected to be still extant.
G?	Not ranked to date.	SR	Reported, but without persuasive documentation which would provide a basis for either accepting or rejecting the report (e.g. misidentified specimen). Some of these are very recent discoveries for which the program has not yet received first-hand information; others are old, obscure reports that are hard to dismiss because the habitat is now destroyed.
G#T#	Rank for subspecies or varieties where # is equal to 1, 2, 3, 4, 5, H, U, X, or ?.	SRF	Reported in error (falsely), but this error persisted in the literature.
HYB	Hybrid	SU	Possibly in peril in Alabama but status uncertain; more information needed.
Special state ranking for migrants:		SX	Apparently extirpated from Alabama.
SZ	Not of conservation concern in Alabama because species in this category are so widely and unreliably distributed during migration or in winter that no small set of sites could be set aside with the hope of significantly furthering their conservation. A rank of SZN indicates the species does not breed in Alabama. Species that have resident breeding populations that are augmented in winter by non-breeding migrants may have dual ranks, one each for the breeding (B) and non-breeding (N) components.	S?	Not ranked to date.
SB	Regularly occurring, migratory and present only during the breeding season. A rank of S3B indicates a species uncommon during the breeding season (spring/summer) in Alabama.		
SN	Regularly occurring, usually migratory and typically non-breeding species in Alabama; this category includes migratory birds, bats, sea turtles, and cetaceans which do not breed in Alabama but pass through twice a year or may remain in winter. A rank of S2B,S5N indicated a rare breeder but a common winter resident.		

Definitions of Federal & State Listed Species Status

Federal - U.S. Fish and Wildlife Service

Endangered Species (LE) - in danger of extinction throughout all or a significant portion of their range.

Threatened Species (LT) - likely to become an endangered species within the foreseeable future throughout all or a significant portion of their range.

Proposed Endangered (PE) - the species is proposed to be listed as endangered.

Proposed Threatened (PT) - the species is proposed to be listed as threatened.

Partial Status (PS) - an infraspecific taxon or population has federal status but the entire species does not-- status is in only a portion of the species range

Candidate (C) - Species for which the U.S. Fish and Wildlife Service has on file enough substantial information on biological vulnerability and threat(s) to support proposals to list them as endangered or threatened. Development and publication of proposed rules on Candidate taxa are anticipated, and USFWS encourages other agencies to give consideration to such taxa in environmental planning.

State - Alabama Department of Conservation and Natural Resources (ADCNR)

Wildlife & Freshwater Fisheries Division

State Protected (SP) - Species with a state protected status are protected by the Nongame Species Regulation (Section 220-2.92, page 73-75) of the *Alabama Regulations for 1999-2000 on Game, Fish, and Fur Bearing Animals*. Copies of these regulations may be obtained from the Division of Wildlife & Freshwater Fisheries, Alabama Department of Conservation & Natural Resources, 64 North Union Street, Montgomery, AL 36104.

⁴ *Charadrius alexandrinus nivosus*, LT; west coast. Populations of subspecies *nivosus* within 50 miles of the Pacific coast in California, Oregon, Washington, and Mexico are listed by USFWS as Threatened

⁵ *Charadrius melodus*, LE, LT; listed as threatened in Alabama. Listed by USFWS as Endangered in Great Lakes watersheds of Illinois, Indiana, Michigan, Minnesota, New York, Ohio, Pennsylvania, and Wisconsin; Threatened elsewhere. Draft revised recovery plan (1994) suggested that status in the Northern Great Plains should be changed to Endangered.

⁶ *Sterna antillarum* subspecies complex; some subspecies are federally listed. Listed by USFWS as Endangered on U.S. west coast (subspecies *browni*) and on interior U.S. rivers, except within 50 miles of the coast.

⁷ *Hemantopus mexicanus knudseni*, LE; Hawaii

⁸ *Haliaeetus leucocephalus*, LT throughout range; proposed for delisting. Federal status is categorized by state/region, rather than by subspecies. Listed as Threatened in the coterminous U.S.; not federally classified as Endangered anywhere as of mid-1995

⁹ *Ammodramus savannarum*. Subspecies *floridanus* of Florida is listed by USFWS as Endangered

¹⁰ *Pelecanus occidentalis*, Listed by USFWS as Endangered rangewide except along the U.S. Atlantic coast and in Florida and Alabama. A status change from endangered to threatened has been recommended for California populations

Site Description

Written description - Describe the site in the space below. Try to convey a mental image of the site features (including vegetation, significant animals and plants, aquatic features, land forms, geologic substrata, scenic qualities, etc.):

Evidence of disturbance - Describe the nature of disturbance or threat to site or elements. Discuss management considerations:

Protection Urgency: (circle one)

- P1** - immediately threatened
- P2** - threat expected within 5 years
- P3** - definable threat, but not in next 5 years
- P4** - no threat known for foreseeable future
- P5** - land protection complete

Management Urgency: (circle one)

- M1** - action required immediately or element will be lost within 1 year
- M2** - action will be needed within 5 years to prevent loss of element
- M3** - action will be needed within 5 years to maintain current quality
- M4** - no action needed currently, but may be needed in future
- M5** - no serious management needs known or anticipated

DATA REQUEST TYPES

By Quadrangle: In the interest of providing useful information regarding the biodiversity of any **specific project site**, ALNHP will research the USGS quadrangle on which the project site occurs as well the 8 surrounding quadrangles. A \$40 fee will be charged for each quadrangle researched. A \$25 processing fee will be charged. Therefore, the standard price estimate for a given project is \$385 (9 * \$40 + \$25). **Searches will not be made for a single quadrangle since what is documented does not accurately represent the rare flora and fauna of a given area.** The report will include The Nature Conservancy's global and state ranks, as well as federal and state statuses of rare species documented. Each species will have locational data given to the nearest minute in precision. Species information provided will also include last observation of species and occurrence data recorded on site. In cases where rare species occur directly on the project area, ALNHP will provide latitude and longitude in seconds (for project area only) to the landowner. ALNHP will provide locational data in seconds at its own discretion and will determine this need on a case by case basis.

By County with Element Occurrence Data: This report is useful when the information requested is to be used on a project of **broad scope** where information by county is more applicable. This report will include state and global ranks, federal and state statuses, and rare species locational data given in nearest minute of precision. The fee schedule will be as follows: 1-15 counties--\$600; 16-30 counties--\$1,200; 31-45 counties--\$1,800; and 46-67 counties--\$2,400. The \$25 processing fee does not apply to these requests.

By County List: This list provides a **general overview** of rare species located within a county and includes species name, global and state ranks, and federal and state statuses. The fee for this list is \$25 per county.

Other: If the information requested does not relate to a specific quadrangle, county or counties, *i.e.* species characterization abstracts, source abstracts, *etc.*, a fee of \$200 will be assessed. If the search will require more than two hours work, the requestor will be notified. ALNHP reserves the right to reduce or waive charges to non-commercial users of the database.

Any material supplied from the Alabama Natural Heritage Program will not be published without prior **written** permission, and without crediting the Alabama Natural Heritage Program as the source of material. All information remains the property of ALNHP and may not transferred to or used by any other party or individual. By signing below, the requestor agrees to the terms of this request and to its accuracy and completeness. The ALNHP will not be responsible for any inaccuracies in any data that it provides. Please be aware that the ALNHP's database cannot provide a conclusive statement on the presence, absence or condition of significant natural features in any part of Alabama. The response only summarizes the existing information regarding the natural features or the locations in question known to the ALNHP at the time of the request. The information should never be regarded as the final statement on the site being considered, nor should it be a substitute for field surveys required for environmental assessments.
